

Underland User's Guide

By: Myles, Sang, Hannah

Play as a character stuck in UnderLand. After suffering from a horrible accident and falling into a coma, you find yourself in a mysterious world created out of your memories. You're trying to wake up, but in order to do that, you have to escape your past. Your job is to find Growth Items hidden throughout the level so that you can shrink and grow in size to get through the Portal -- each Portal requires that you become as big or as small as you were during that memory to escape. But be careful: your memories are trying to stop you from escaping and waking up! They're going to give it their all to keep you under, so make sure you get them first or escape before they get *you!*

Game Play Features:

Play with your arrow keys to navigate the world.

- There are spikes that you should avoid.
- There are fake doors and tunnels that do not lead anywhere. You must explore every nook and cranny to find the exit. The exit will be a door with a star.
- The main game mechanic is to use the size items to turn smaller or bigger.
- A candy will resize you to a small child so you can climb ladders and go through small doors.
- Use the beer item to grow bigger and jump high to get through platforms.
- However, there might be a door that is big enough for an adult that will be a fake door. Be careful not to fall or you might die on impact.
